RE: Ranken Technical College - New Welding & Fabrication Shop

Dear Brian,

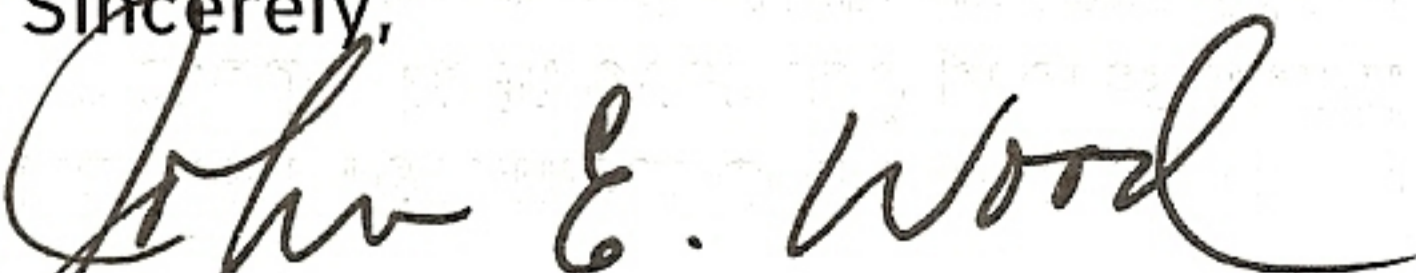

Ranken Technical College is a private, non-profit institute of higher education that trains its students in over 100 professional fields. Their state-of-the-art equipment, facilities and campus are continually updated to provide students with exposure to the most cutting-edge technology.

Interface Construction Corporation was competitively selected to renovate Ranken's 7,500 square foot fabrication and welding shop. This project was a time sensitive, complex project which required extensive planning and coordination of mechanical subcontractors. During construction, it was discovered that the existing underground plumbing structure had deteriorated. Interface responded in a timely manner with a solution which had minimal impact on the project schedule.

This project required the owner, architect and contractor to act as a team to overcome typical construction issues. During this entire project, Interface's Superintendent and Project Manager acted with professionalism and a sense of urgency to complete this project on time and within budget.

Ranken Technical College is proud of this facility and highly recommends Interface Construction Corporation for future projects.

Sincerely,

John E. Wood
Vice President for Student Success
